Reported v0.4.0 summaries; historical solver status not recorded
A Measured build and structured solve times
m=1000; support 81–103
ΔF proxy = 1%; realized inbreeding not measured
time (s, log scale)
candidates n (log scale)
dense G build: measured (independent loci)
n² build projection; omitted by policy
historical structured solve: Ne_c≈50
B Theoretical array footprints
Array storage only; excludes solver workspace.
Packed genotypes use a different footprint.
array footprint (GiB, log scale)
candidates n (log scale)
dense float64 G: 8n² bytes
dense float64 Z: 8nm bytes
16 GiB reference capacity
